SUMMARY

Software Engineering graduate focused on full-stack web development (MERN, Next.js) and applied AI engineering. Experienced in building production-ready applications with RAG pipelines, real-time systems, secure authentication, and cloud deployment. Seeking software engineering internships or junior developer roles.

EDUCATION

University of Sargodha

Bachelor of Science in Software Engineering — CGPA: 3.3 / 4.0

Sargodha, Pakistan

2022 – 2026

PROJECTS

EduQuest — AI-Powered Gamified Learning Platform (Final Year Project)

2025 – 2026

React, Node.js, MongoDB, LangChain, Gemini, Socket.io, Docker

[Live Demo](#) | [GitHub](#)

- Built a Retrieval-Augmented Generation (RAG) pipeline with LangChain, Gemini embeddings, and MongoDB Vector Search, letting students get answers grounded in their own uploaded PDFs, with auto-generated quizzes and context-aware explanations.
- Engineered real-time multiplayer coding competitions with Socket.io, featuring live leaderboards and synchronized game state across players.
- Designed a gamification engine (XP and leveling, 49 badges, 7 competitive leagues, streaks, and daily/weekly quests) to drive user retention.
- Implemented Google OAuth 2.0 and JWT authentication plus a self-hosted Piston code-execution service on Docker/AWS supporting 15+ programming languages.
- Shipped the full system end-to-end — schema, a 16-route REST API, React frontend, and cloud deployment on Vercel and Render.

Video Platform Backend

2024

Node.js, Express.js, MongoDB, JWT, Cloudinary, Multer

[GitHub](#) (replace with this project's repo link)

- Built a YouTube-style REST API with Node.js, Express.js, and MongoDB following MVC architecture.
- Implemented dual-token JWT authentication (access + refresh) with bcrypt hashing and httpOnly cookies for secure session management.
- Integrated Cloudinary and Multer for avatar and cover-image uploads via multipart/form-data.
- Wrote MongoDB aggregation pipelines for subscriber counts, channel profiles, and nested watch history.
- Created reusable asyncHandler, ApiError, and ApiResponse utilities for consistent error handling across all routes.

[Your Next.js + TypeScript Project Name]

2026

Next.js, TypeScript, [other tech you used]

- [ADD THIS WITHIN A WEEK — 1 line: what the app does and the main problem it solves.]
- [1 line: a key feature you built and the Next.js/TypeScript concepts you used (e.g. App Router, server components, typed APIs).]
- [1 line: deployment + a result/outcome, with a Live Demo and GitHub link like the projects above.]

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, Next.js, Redux, Tailwind CSS

Backend: Node.js, Express.js, REST API Design

Databases: MongoDB, PostgreSQL, MySQL, MongoDB Vector Search

AI / LLM: LangChain, Gemini Embeddings, RAG Pipelines, LLM Integration

Auth & Cloud: JWT, Google OAuth 2.0, bcrypt, Cloudinary, Multer

Developer Tools: Git, GitHub, Docker, Postman

CERTIFICATIONS

The Complete Full-Stack Web Development Bootcamp

Udemy

Instructor: Angela Yu — React, Node.js, PostgreSQL, responsive design, version control, and full-stack projects.
